Abstract of JP2002143065

PROBLEM TO BE SOLVED: To provide a cleaning implement which is easy to use and uses a cleaning sheet fully without causing a waste. **SOLUTION:** A cleaning part 12 is formed of an elastic material so as to have cross-sectional shape thicker in the center part 12b than the base part side 12a and gradually thinner from the center part 12b toward the tip part. The cleaning part 12 is bendable from a base part side tail end 12a to the center part 12b (a bend part 22), and a part from the center part 12b to a tip part 12c of the cleaning part 12 is made as a sheet mounting part 16 to the outer peripheral surface of which a cleaning sheet 18 is attached. An object part such as a floor face is cleaned in the mounted state of the cleaning sheet 18 to the mounting part 16.
